Vilagossag, No 65, 1949.

The Chinoin Plant has started the manufacture of chloroform, for the first time in Hungary. The plant employs over 1,000 workers. The Hungaria Sulfuric Acid Plant supplies the chloral necessary for the manufacture of chloroform. This plant has also developed a new type of sensitizer for use with colored film.

The manufacture of paraaminosilicil, which has proved to be an outstanding drug for use against tuberculosis, is going ahead at full speed. The plant will shortly begin the manufacture of heralgen, a new pain-relieving drug which has no aftereffects. Chemical Engineer Varga says theat the plant will also be ready to produce pyramidon as soon as the Lampart Plant telivers the necessary enamel utensils.
